

SUMMARY

An AI Software Engineer with over 2 years of hands-on experience designing, developing, and deploying AI-powered, backend, and full-stack applications using Python, Java, Go, Spring Boot, FastAPI, React, JavaScript, and SQL. Experienced in delivering end-to-end software solutions, from requirements analysis and system architecture to development, testing, deployment, monitoring, and continuous optimization. Passionate about building intelligent, scalable, and production-ready applications that solve complex business problems through modern software engineering and artificial intelligence.

Hands-on experience building projects powered by Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, LangChain, LangGraph, Model Context Protocol (MCP), Ollama, Hugging Face Transformers, Sentence Transformers, OpenAI-compatible models, vector databases, semantic search, embedding pipelines, and intelligent document processing systems. Developed AI applications including conversational assistants, intelligent automation platforms, document intelligence solutions, observability platforms, code analysis tools, and real-time monitoring systems with a focus on performance, accuracy, and user experience.

Strong experience in backend engineering with FastAPI, Spring Boot, RESTful APIs, microservices, asynchronous processing, event-driven architectures, WebSockets, and distributed application design. Built scalable software using Kafka, Zookeeper, Redis, caching strategies, message-driven communication, and concurrent processing while following Clean Architecture, SOLID principles, Design Patterns, Domain-Driven Design concepts, and secure API development practices.

Proficient in designing and managing both relational and NoSQL databases including PostgreSQL, MySQL, SQLite, MongoDB, and Redis, with hands-on experience in schema design, query optimization, indexing, transactions, data modelling, and high-performance data access. Familiar with vector databases and retrieval systems to power AI search, recommendation, and knowledge-based applications.

Experienced with modern software development tools and DevOps practices including Git, GitHub, GitHub Actions, Jenkins, Docker, Kubernetes fundamentals, Linux, CI/CD pipelines, automated testing, logging, monitoring, debugging, and deployment workflows. Strong understanding of Object-Oriented Programming, Data Structures & Algorithms, System Design, distributed systems, software performance optimisation, and scalable application architecture.

TECHNICAL SKILLS

Languages:

Java, Python, Go, JavaScript, TypeScript (Basics), SQL, HTML5, CSS3, C, C++

Frontend:

React.js, Next.js, HTML5, CSS3, JavaScript, Tailwind CSS, Bootstrap.

Backend:

Spring Boot, FastAPI, Flask, RESTful APIs, MVC Architecture, WebSockets, Microservices, JWT Authentication, OAuth2

Artificial Intelligence:

Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, LangChain, LangGraph, Model Context Protocol (MCP), Ollama, Hugging Face Transformers, Sentence Transformers, Prompt Engineering, Semantic Search, Embedding Pipelines, Vector Databases, AI Automation, Intelligent Document Processing

Databases:

PostgreSQL, MySQL, MongoDB, SQLite, Redis, SQL Server

Messaging & Distributed Systems:

Apache Kafka, Apache Zookeeper, Redis Streams, Event-Driven Architecture, Asynchronous Processing

DevOps:

Docker, Kubernetes (Fundamentals), Jenkins, GitHub Actions, CI/CD, Linux, Nginx, Vercel, Netlify

Data Science & Machine Learning:

NumPy, Pandas, Scikit-learn, TensorFlow, OpenCV, Matplotlib, Data Analysis, Feature Engineering

Tools & Frameworks:

Git, GitHub, Postman, Maven, IntelliJ IDEA, VS Code, Jupyter Notebook, Figma, Swagger/OpenAPI, EmailJS

Architecture & Design:

Clean Architecture, SOLID Principles, Design Patterns, Object-Oriented Programming (OOP), REST Architecture, System Design, Microservices Architecture, API Design

Core Computer Science:

Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems (DBMS), Object-Oriented Design, Software Engineering, Multithreading, Concurrency

WORK EXPERIENCE

AI Software Engineer - Evanti Tech

Mumbai, India

- Developed and integrated REST APIs using FastAPI to automate internal workflows and improve system efficiency.
- Optimized SQL queries and data processing pipelines, improving application performance and data retrieval speed.
- Collaborated with cross-functional teams to troubleshoot production issues and deliver scalable software solutions in an Agile environment.

Software Engineer Intern - IPS Limited

Remote(UK)

- Implemented database operations using Spring Data JPA and optimized SQL queries to improve application performance.
- Collaborated with senior developers through Git-based workflows, code reviews, and Agile sprint planning.
- Developed and tested backend features following object-oriented programming principles and clean coding standards.

PROJECTS

AI-Powered Autonomous Observability Platform

May 2025 - Present

Tech: Python, Flask, React, WebSockets, Scikit-Learn, Prometheus, Grafana

- Developed an AI-powered observability platform that predicts service failures, detects anomalies, performs root cause analysis, and monitors SLA/SLO compliance in real time using Machine Learning.
- Engineered intelligent incident management features including dependency analysis, cascade failure detection, explainable AI (XAI), incident replay, and autonomous self-healing recommendations.
- Built a real-time monitoring dashboard with WebSockets, Prometheus, and Grafana to visualize infrastructure health, risk scores, forecasting, and operational insights for distributed applications.
- Designed a plug-and-play metrics ingestion framework enabling seamless integration with external applications (e.g., Spring Boot services) for centralized AI-driven monitoring and operational intelligence.

RepoMind AI – AI-Powered Repository Intelligence Platform

Tech: Python, FastAPI, React, JavaScript, GitPython, Ollama, Qwen 2.5, REST APIs

- Developed an AI-powered GitHub Repository Analyzer using Python, FastAPI, React, and Ollama to analyze public GitHub repositories and generate AI-based project summaries.
- Built a repository analysis engine that extracts project structure, programming languages, dependencies, code metrics, entry points, functions, and classes without relying on README files.
- Integrated a local Large Language Model (Qwen 2.5 via Ollama) to automatically explain a project's purpose, architecture, technology stack, and key features from the source code.
- Designed a responsive React dashboard to display repository insights, code statistics, architecture details, and AI-generated analysis through a clean and interactive interface..

AI Book Summarizer

Tech: Java, Spring Boot, Thymeleaf, MySQL

- Developed an AI-powered web application that generates book summaries, discussion questions, and AI-generated answers to help users better understand books.
- Built an interactive reading experience with dynamic book cover display, clickable questions, and real-time AI responses.

- Integrated AI to automatically generate accurate summaries and meaningful follow-up questions based on user-selected books.
- Designed a responsive and user-friendly interface, ensuring smooth navigation and an engaging reading experience.

URL Shortener

Tech: Java, Spring Boot, Spring MVC, Spring Data JPA, MySQL, HTML, CSS, JavaScript, jQuery, Maven

- Developed a URL shortening application that converts long URLs into unique, shareable short links while maintaining accurate mappings between original and shortened URLs.
- Implemented automatic redirection from shortened URLs to their original destinations, ensuring fast and reliable URL retrieval.
- Built URL validation and duplicate detection mechanisms to prevent redundant entries and improve the consistency of stored URL mappings.
- Designed an intuitive interface that allows users to generate, view, and copy shortened URLs, providing a seamless user experience.

EDUCATION

Institute of Infrastructure Technology Research and Management

Ahmedabad, India

Bachelor of Technology - Computer Engineering
